

Interested in an applied research position related to groundwater, private wells, and water quality? Our research has direct, actionable outcomes that benefit the public as well as add to the knowledge we apply in outreach efforts through our private well (www.privatewellclass.org) and water operator (www.wateroperator.org) programs. Our focus for this position is drinking water and emerging contaminants, dissemination of research results, and providing education to stakeholders. The Illinois State Water Survey at PRI has a rich 128 year history of serving the public and conducting research that makes a difference. We currently have research projects ongoing related to lead and legionella in homes with private wells. You will be able to develop your own research program over time, and we would expect you to be interested in furthering PRI's One Health approach for solving today's complex water problems. Email interest and questions to: Steve Wilson-sdwilson@illinois.edu

Steve Wilson

Groundwater Hydrologist

Head- Environmental Public Health, Information and Data Services Section

Program Director, PrivateWellClass.org and WaterOperator.org

Illinois State Water Survey - [1895-2020: 125 Years of Water and Weather Science](#)
